

**Wolverhampton
Diabetes Care**

What Care to Expect

The Wolverhampton Diabetes Network

A key function of the WDNSFLIT is to ensure the promotion, support and management of an effective local diabetes network – the Wolverhampton Diabetes Network

The WDN describes the relationship between all parties contributing to diabetes care in Wolverhampton through the WDNSFLIT and the WLDSAG. As much as possible, it is proposed that all parties should attempt to work together to maximise effective, high quality care for people with diabetes, whilst minimising inefficiencies and reduplication of effort.
